| Subject: Maths |  |  |  |  |  |  |  |  |
| Year 10 Foundation/Higher |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  | Autumn 1 | Autumn 2 | Spring 1 | Spring 2 | Summer 1 <br> Foundation | Summer 2 <br> Foundation | Summer 1 Higher | Summer 2 Higher |
| Knowledge /Skills <br> Skills | Percentage change compound interest, growth and decay | Simultaneous Equations substitution, elimination, graphical | Linear Graphs Equation of a straight line, perpendicular and parallel lines | Compund measures density and pressure | Sequences arithmetic and geometric | Rounding Error intervals | Sequences arithmetic and geometric | Rounding Bounds |
|  | Surface Area Surface area of cones, frustrums, spheres, pyramidsWater Buggy project | Formulae <br> Rearranging formulae | Real life graphs Plotting and interpreting real life graphs, equations of real life graphs | Ratio ratio and algebra, combining and changing ratio | Sampling, sampling for bias | Indices index laws | Sampling, sampling and capture recapture | Indices Index laws |
|  | Volume cones, frustrums, spheres, pyramids | Trigonometry right angled trig, exact trig values, elevation and depression | Set Notation venn diagrams and set notation | Graphs velocity time graphs, cubic, reciprocal and exponential graphs | Proportion Direct and inverse proportion | Brackets expanding and factorising brackets | Proportion Direct and inverse proportion | Recurring Decimals fractions to recurring decimals |
|  |  | Constructions construction and loci, bisectors | Tree Diagrams independent and dependent events | Financial Maths proje | Transformations transforming shapes | Handling data and statistical diagrams grouped data and drawing /interpreting statistical diagrams | Transformations transforming shapes | Brackets expanding and factorising brackets |
|  | percentages of an amount, decimal multipliers, formulae for area of shapes, formulae for volume of shapes, units of measure | Adding and subtracting terms, directed number, substitution, inverse operations, factorising, identifying sides of a right angled triangle, use of calculator to square root , use of compass | Be able to identify the gradient and y intercept, understand how gradients are the same or different for perpendicular or parallel lines, coordinates, understand conversion graphs, | Formulae for density/mass /volume/pressure, simplifying ratios, algebraic manipulation,plotting and identifying graphs, use of bank statements and bills | addition, subtraction, division, multiplication, proportional graphs and algebraic manipulation, measuring, plotting coordinates and identifying mirror | place value, rounding, power laws, roots, reciprocals, multiplication, division of terms, simplifying terms, frequency tables, scatter graphs, pie charts, bar charts | addition, subtraction, division, multiplication and algebraic manipulation, measuring, plotting coordinates and identifying mirror lines, use of scale factors | Handling Data and statistical diagrams cummulative frequency and box plots |
|  |  |  |  |  |  |  |  | Understanding of error intervals, rounding decimals, power laws, roots, |

| Key Questions | Where is percentage change used, does it matter if we take the original amount from the new? How is surface area to volume? | What does simultaneous mean? how could we respresent this graphically? Why would we need to rearrange formulae? How would we deal with the subject on both sides? is the calculation for a smaller side different to finding the hypotenuse? How do we identify the hypotenuse? what is the definition of a loci and give an example of real life? | How does the gradient change for parallel and perpendicular lines? how is a stationary point identified on a time distance graph? What is the difference between dependent and independant events? When do we add and when do we multiply on a tree diagram? | How do we know what units to use when calculating density? can ratio calculations be related to fractions? what does a debit and a credit mean? | What is the common difference? what is the common ratio? what factors can cause bias when sampling? what type of smapling is apporpriate for this question? can we apply direct and inverse proportion to real life?, how do we represent a vector translations in different quadrants? | Why do we need to use error intervals? how do we find the highest possible value?, what is a fractional index? | What is the common difference? what is the common ratio? what factors can cause bias when sampling? what type of smapling is apporpriate for this question? can we apply direct and inverse proportion to real life?, how do we represent a vector translations in different quadrants? | Why do we need to use error intervals ? how do we find the highest possible value?, what is a fractional index?, what does the interquartile range tell us? what should be use to compare two sets of data? |

| Assessment | Students sit an end of the answers and identify Continued low stake q <br> A01: Use and apply Students should be abla -accurately recall facts, -use and interpret nota -accurately carry out r <br> AO2: Reason, interp Students should be ab -make deductions, infe -construct chains of re -present arguments and -assess the validity of <br> AO3: Solve problems Students should be ab -translate problems in -make and use conne -interpret results in the -evaluate methods us -evaluate solutions to | term test at the end of ify marks and common uestioning in class. Peer <br> standard techniques le to: <br> , terminology and defin ation correctly. <br> outine procedures or se <br> et and communicate le to: <br> rences and draw concl asoning to achieve a gi nd proofs. <br> an argument and critica <br> within mathematics le to: <br> mathematical or non-m tions between different context of the given pr d and results obtained. identify how they may $h$ | ach term, these are mar misconceptions. mentoring. AFL whitebo <br> ions. <br> tasks requiring multi-ste <br> mathematically <br> sions from mathematica en result interpret and co <br> ly evaluate a given way <br> nd in other contexts <br> thematical contexts into parts of mathematics. blem. <br> ve been affected by ass | ked by the teacher oards and encourag <br> p solutions. <br> information. ommunicate informa of presenting inform a process or a serie <br> umptions made. | full ReACT to th <br> t <br> accurately. <br> mathematical pr | st is completed <br> ses. | teach | visualiser to model |

|  | Literacy:Key word as above, additional knowledge organisers provided to students at the beginning of a new topic, collins dictionary definitions shared https://www. collinsdictionary.com/word-lists/mathematics-mathematical-terms. Knowledge organisers will be stuck into books at the beginning of every new topic, to promote literacy and key vocabulary and skills. <br> Freya Model, defining mats:(definition, facts, examples and non examples, including misconceptions). VCOP support models to aid students in using connectives and other language devices to explain a mathematical model or compare data.https://www.missbsresources.com/maths-resources/literacy-within-mathematics |
| :---: | :---: |
|  | Numeracy:Key skills are outlined |
| ite | Character/SMSC/:https://www.bbc.co.uk/bitesize/tags/zrsg6v4/jobs-that-use-maths/1 links to jobs that relate to maths are relayed regularly in lessons, opportunities for cross curricular links outlined in scheme of work. |
| SMSC/ Character | Oracy: encourage teacher-led discussion with equal emphasis on speaking and listening. Group work/paired work. Teacher models correct mathematical processes. Opportunities for logical reasoning and dialogue e.g via Inquiry Maths and reasoning/proof tasks. No hands up questioning approached used |
|  | Intermediate maths challenge Revision sessions after school STEM club |
| Enrichment | Statistics project -Real life application to collate and analyse data |
| opportunities and futures | Maths buddies- opportunities to work with different ages groups and ability Trips, outside speakers and futures links within curriculum. |
